

Your receipt quick guide

Snap on your iPhone. Review on your Mac.

SET UP ONCE

On your Mac, open **Settings > Choose folder**. Select the folder used by your iPhone shortcut:

iCloud Drive > Shortcuts > All new receipts

1 Take the photo

On your iPhone, run **Save Bakery Receipt** and photograph the receipt. iCloud transfers the file to your Mac automatically.

2 Bring it into the app

On your Mac, open **Receipts > Check receipt folder**. The app imports new files, skips duplicates and reads their text.

3 Check the purchase details

Select a receipt and confirm its **retailer and purchase date**. Click **Find candidate lines**, then **Edit** each purchase to check the ingredient, paid price, package quantity and unit.

Example: 60 eggs = quantity **60**, unit **each**. Exclude personal items and refunds. Saved matches are reused when available.

4 Approve the updates

Once the details are correct, click **Approve price updates** and confirm. Ingredient costs and suggested prices recalculate automatically.

Your selling prices stay under your control.

The app suggests changes; it never changes your selling prices for you.

If you get stuck

No receipt showing? Check that the file has appeared in the iCloud folder on your Mac, then click **Check receipt folder** again.

Item not found or text incorrect? Use **Add purchase** and enter the details from the original. Click **Open original** to see it larger.
